Table of Contents

The Arizona Department of Transportation (ADOT) does not have the obligation to use any products listed in the Approved Products List (APL). The APL is simply documented the facts that the listed products have been tested, evaluated, or examined under ADOT standards, and were found acceptable to be used in ADOT projects. Please refer to section 106.14 of the Arizona Department of Transportation Standard Specifications for Road and Bridge Construction, 2000 edition, for more detailed description of APL use. ADOT reserves the rights to update this APL periodically without prior notice. ADOT is not liable for any incidental or consequential damages caused by using the data listed on neither the APL nor the revision of the APL. A current APL can be downloaded from the ADOT web page or obtained from the Arizona Transportation Research Center at 2739 E. Washington St., Mail Drop 075R, Phoenix, Arizona 85034-1422. The APL is maintained by the Arizona Transportation Research Center. Trade or manufacturer names, which appear herein, are cited only because they are considered essential to the objectives of the list. The U.S. Government and the State of Arizona do not endorse products or manufacturers. Please review Federal Highway Administration memorandums and documents for product Category I, II, III, IV Certification requirements and approvals at <http://safety.fhwa.dot.gov>. A photocopy of National Cooperative Highway Research Program (NCHRP) Report 350, *Recommended Procedures for the Safety Performance Evaluation of Highway Features*, may be purchased from the Transportation Research Board at their publication search site: <http://www.dcdatalink.com/trb/trb.htm>.

Notes:	(1) This adhesive is not suitable for large quantity installations of raised pavement markers (RPMs) where a high degree of production is needed. It is intended to be used when there is only a small number of RPMs to be installed and/or for minor repair and maintenance work. In performance it appears to be an equal to bituminous adhesive. (2) Before melt-in-place RPM adhesive can be accepted as an equal to those adhesive products listed here in, it must pass a two-year in service road test on a site specified by TCPEC (e.g. westbound I-10 at Deck Tunnel). The tested adhesives must retain the RPMs to the pavement surface for the duration of the test. The required test period of two years may be made longer by TCPEC based on the results of on going tests. (3) Accelerated acceptance of new adhesives is possible after one year of successful performance on the approved TCPEC test deck and if the new adhesive has also been similarly tested and approved by other agencies (e.g. Texas, California).

Notes:	<p>1451 Before a new abrasion resistant marker can be listed herein, it must pass a two-year in service road test on a site specified by TCPEC (e.g. westbound I-10 at Deck Tunnel). The tested markers (typically a type C or G) must maintain adequate brightness throughout the length of this test. Adequate retained brightness will be determined by TCPEC, (via visual inspection and /or retroreflectivity readings), but will mostly be based on the comparative performance of listed markers that should be placed in the same test deck. The successful performance of the tested Type C (white/red) or Type G (white) RRPM is assumed to assure proper performance for the Type D (Yellow/Yellow) and Type H (Yellow) markers. The required test period of two years may be made longer by the TCPEC based on the results of ongoing tests.</p> <p>(2) Permanent RRPM's in this class should be tested to confirm the presence of an abrasion resistant surface. An appropriate test is to use a piece of steel wool and rub it on the lens of the reflector of the RRPM. If there is an abrasion resistant surface on the marker, the lens will show few if any scratches. If the marker is easily scratched, it is not an abrasion resistant treated marker.</p> <p>(3) Accelerated acceptance of new marker is possible after one year of successful performance on the approved TCPEC test deck and if the new markers have also been similarly tested and approved by other agencies (e.g. Texas, California). Additionally, to gain conditional approval the manufacturer must warranty their marker until it has successfully completed the two-year test. If the marker does not pass the two-year test the manufacturer must agree to replace all failed markers that are installed on the ADOT roadways during the conditional approval period. Conditional approvals do not apply to the state raised pavement marker maintenance contract.</p> <p>(4) Raised retroreflective markers (RRPM) should not be applied via a pavement surface configuration above elevation of 3800 feet or more. See subcategory 23M for listing of RRPM products suitable for recessed applications.</p>

Notes:	<p>(1) These markers should only be installed in areas of moderate to light snow removal activity (typically 4000 ft to 6000 ft +/-). Tests have shown that the Ray-O-Lite "Brute" and Stimsonite 953 may last longer than the Stimsonite 948.</p> <p>(2) All markers listed require a road test.</p> <p>(3) Field-testing on I-17 has shown that the Highway Ceramics/Safeline Industries CDR-1 markers can last at least three winters and still achieve adequate or better brightness. No other marker listed here has been able to match this performance. Thus CDR-1 marker has been found to be suitable for high snow removal areas (typically roadways above 6000 feet in elevation). If the CDR-1 marker is to be used on construction project prior approval per ADOT policy 88-1 is required.</p>

Notes:	<p>(480- - Profile markings shall be used at elevations of 3,800 feet and less. These types of pavement markings are not suitable for snow removal areas.</p> <p>(2) The use of this type of product requires an item number special provision. An approved version of this special provision is available from ADOT Contracts and Specifications.</p> <p>(3) Profile pavement marking require the use of specialized installation equipment. Due to the expense of this equipment a minimum quantity of 40,000 feet should be involved on a project to make the utilization of this type of marking system cost effective.</p> <p>(4) For shoulder applications profile pavement marking systems are intended to be used as an alternative to contiguous ground-in longitudinal rumble strip. However, profile markings should only be specified when some reason prevents the use of the ground-in rumble strip (e.g. when shoulders are less than 4 feet wide and there are obstructions immediately adjacent to the roadway and/or there is significant bike use, etc.)</p> <p>(5) Profile markings can be used on the centerline.</p> <p>(6) The approval of other profile pavement marking products other than those listed, requires at least a six-month Arizona based road test and proof of other successful applications.</p>
